Exactly what you've been waiting for: Back-up power for portable electronic devices

Who hasn't experienced this yet? Just when you're listening to your favorite song, having an important phone call or trying to take the perfect picture, your battery dies on you. Usually batteries of portable electronic devices become empty in the least convenient moments.

With the Mobile Booster of SANYO you will never have to see "Battery empty" again.

You will always have enough energy available

With the Mobile Booster, most devices which can be charged via USB-cable, like smart phones, mobile phones, digital cameras, MP3 player or portable game consoles can be charged easily, fast and on the go. Just put a Mobile Booster in your pocket and you will always have the energy you need with you.

The Mobile Boosters are the ideal companions to have

When traveling or when being out in the nature – the Mobile Booster are the ideal emergency companions, if the battery of your portable device is empty and no AC-plug is anywhere near you. Another advantage: When being in foreign countries you won't need an adapter for charging your portable electronic devices. Plugs that don't fit or different standards in supply voltage won't be a problem for you anymore.

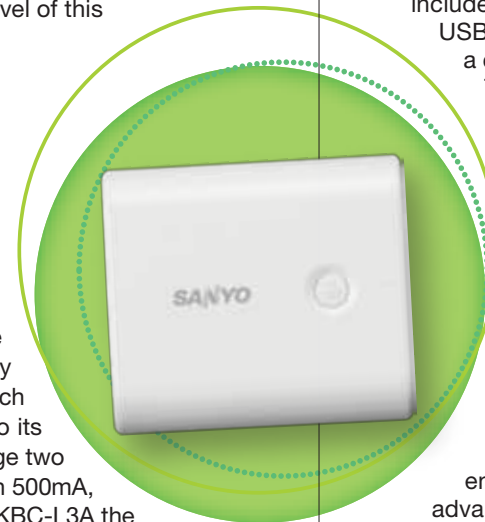

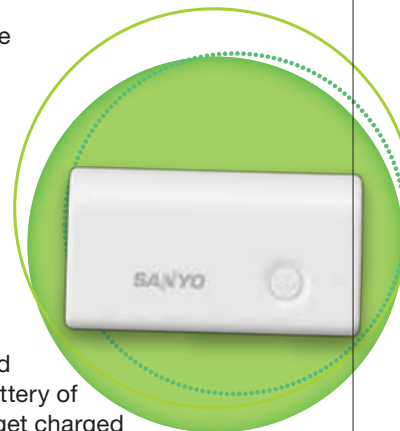

3 versions – 3 devices full of power

The Mobile Boosters do have a modern design and are available in three different versions. All sets do include a USB-mini-cable.

KBC-L3A

The Mobile Booster KBC-L3A offers a high capacity due to an integrated Lithium-Ion rechargeable battery of 2500mAh. This battery can get charged via the USB-port of a computer within approximately seven hours. It can charge the battery of a portable device for about two hours with 500mA. The battery capacity level of this Mobile Booster can easily be checked via the three different levels of the indicator light.

KBC-L2B

KBC-L2B is the most powerful Mobile Booster available with its two Lithium-Ion batteries of 5000mAh in total. This Mobile Booster is the first and only back-up battery being sold, which can also charge the iPad. Due to its two USB-ports it can even charge two devices for about two hours with 500mA, or one device with 1A. Just like KBC-L3A the battery capacity level can be determined by the three different levels of the indicator light. It can be charged via USB-cable within fourteen hours or via the AC-plug in only seven hours.

The set also includes a micro-USB-plug which makes this Mobile Booster compatible with even more devices.

KBC-E1S

The USB-charger KBC-E1S includes two eneloop Ni-MH rechargeable batteries in size AA, which also can be taken out of the booster. Within only four hours it is fully charged via the included

USB-cable from a computer. The charger supplies about 70

minutes of power for example to a MP3 player or mobile phone. Both eneloop AA rechargeable batteries can also be used for other products, which don't have any USB-port, like alarm clocks, radios or torches.

About eneloop

eneloop rechargeable batteries are having the advantages of both dry cells and rechargeable batteries. They come pre-charged like dry cells and are economical and environmental friendly as they are able to be recharged up to 1500 times. Due to their low self-discharge, fully charged eneloop batteries retain up to 75% of their capacity after being stored for 3 years.
